

PräKasch

Case press

The **PräKasch** machine is a toggle-lever case press designed to press down book cases, posters, calendar backs etc. after turning-in.

Handling as well as output of the **PräKasch** machine are well-suited to the **PräDeck** case maker and the **PräKant** turning-in machine.

The machine is equipped with a removable rubber plate. The book case, poster etc. is placed onto this plate and is then moved into the press.

There are two versions of rubber plates available:

- a plate for book cases which has a thicker area in the centre to press down the spine
- a flat plate for pressing down posters etc.

The advantage of the **PräKasch** over pressing-down machines with rollers is that if bubbles are building between cardboard and cover, no creases occur when they are pressed down.

Models:

- Size 60 x 40 cm, desktop model
- Size 60 x 40 cm, with stand
- XL - Size 85 x 52 cm, desktop model
- XL-U - Size 85 x 52 cm, with stand

The stands may be equipped with swivel castors against surcharge.

Technical data:

Floor space: 55 x 60 cm

Height: desktop: 37 cm
w/stand: 117 cm

Weight: desktop: 25 kgs
w/stand: 35 kgs

Pressing area: 60 x 40 cm
(Other sizes, see models)

Pressure: approx. 400 kp

Delivery includes:
Basic device and 1 rubber plate for book cases

Optional:
Flat rubber plate (for posters)
